Project #4 millings will be hauled to and crushed at a staging area on CR#44 (Dundee-Glenora Rd.)** Pay items shall be bid on a "per square yard" unit price with a Deduct "per square yard price" option for the County to provide Maintenance and Protection of Traffic.

Note: The estimated quantities and individual project scopes of work are based on the best available information. The County desires to complete all projects but due to local budget limitations; no guarantee of the quantity to be milled or that projects will be completed is made or implied. All site conditions and quantities to be verified by bidders prior to bid.

Note: Care shall be taken not to damage utility appurtenances. If any utility appurtenances are damaged by the contractor, all costs incurred to repair or replace these items shall be at the contractor's expense.

The contractor will be responsible for "mini-milling" and/or chipping away existing asphalt from around utility appurtenances. No padding with asphalt material around the structures is required. If any is required, the County will provide and install same.

MATERIAL REQUIREMENTS

The planed surface shall provide a smooth ridge surface free from gouges, continuous grooves, ridges, oil film, and other imperfections of workmanship and shall have a uniform textured appearance. **One hundred (100) percent of the final particle size after being milled and/or run through a crusher and/or screening unit shall not exceed 2 inches.**

Note: All contractors bidding on the project(s) shall provide a written guarantee that the machine and process they intend to use will produce finished millings with a final particle size of which 100% shall not exceed 2 inches.

If necessary, upon visual observations during or within ninety (90) days after milling operations are complete, compliance with the 2" maximum particle size specification shall be determined by an ASTM D422 Particle Size

Minimum Specifications for 2018
COLD MILLING & CRUSHING/SCREENING of ASPHALT PAVEMENT

Analysis test performed by an independent laboratory on a random sample from the stockpile of finished millings. Testing will be done at County expense.

The successful bidder shall be responsible for all costs required to re-crush and/or re-screen all millings that do not meet the 100%, 2" maximum particle size requirement. No change orders or additional costs incurred by the contractor to meet these specifications will be entertained by Yates County.

EQUIPMENT

The equipment for profiling and texturizing pavement surface shall be a power operated, self-propelled milling/planing machine or grinder capable of removing, in one pass, a thickness of asphaltic concrete and/or sub base material necessary to provide profile, cross slope and desired texture uniformly across the entire pavement surface. The equipment shall be track mounted, with rigid suspension and have sufficient power, traction and stability to maintain accurate depth of cut and slope. If a self-contained/propelled, "In-Line" type crusher system is used, the crusher/screening unit will crush and screen millings to a size of not larger than 2 inches and shall be equipped with an automatic belt type conveyor or suitable equipment capable of loading sized material into County or contractor/private trucks.

The equipment shall be capable of accurately and automatically establishing profile grades along each edge of the machine within $\pm 1/8"$ by referencing from the existing pavement by means of a ski or matching shoe or from an independent grade control and shall be controlled by an automatic system for controlling grade elevation and cross slope at a given rate. The milling machine shall be capable of milling the pavement immediately adjacent to the vertical curb face and shall be equipped with means to control dust and other particulate matter created by the cutting action. The speed of the machine shall be variable in order to leave the desired grid pattern specified under "**Surface Texture**". Determination of the type carbide milling teeth shall be the sole discretion of the using agency if the intended milling is to be used as a serviceable riding texture for an indeterminate time.

PROTECTION OF WORK

The Contractor shall protect sidewalks, trees, shrubbery, manholes, curbs, valve covers and any other items which may be damaged by his construction procedures and shall be responsible for repair or replacement of said damaged items at no cost to the County. It shall be the Contractor's responsibility to prevent cuttings from entering drainage structures. Any cuttings entering any drainage structures shall be removed at the Contractor's expense.

CONSTRUCTION

Preparation of Surfaces

Prior to the start of the milling operation, the existing surface shall be power swept by the contractor to remove any material lying on the surface such as debris, mud, sand or any other deposited material. All materials accumulated during the sweeping operation shall be disposed of separately by the Contractor and are not to be mixed with the asphalt material. In addition, the power sweeper shall contain a mechanism to confine any dust, which may evolve during the sweeping operation.

Pavement Removal

The pavement surface shall be removed to the depth, width, grade and cross section as directed by the County. Normal crown sections shall be milled to a 2% cross slope. The County may require that the pavement milling/planing operations be referenced from an independent grade control in those areas where he deems this type of control to be appropriate. For this type of operation, the independent grade control shall be established and maintained by the contractor in a manner acceptable to the County and the final position of it shall be acceptable to the County. In the event the entire pavement width along a section of highway has not been planed to a flush surface by the end of a work period, resulting in a vertical or near vertical longitudinal face exceeding

COLD MILLING & CRUSHING/SCREENING of ASPHALT PAVEMENT

1 1/4" in height, this longitudinal face shall be sloped in a manner acceptable to the County as not to create a hazard to traffic using the facility during periods when construction is not in process. Transverse faces that are present at the end of a working period will be tapered in a manner approved by the County to avoid creating a hazard for traffic. No loose material will be permitted to remain on the pavement. All milled surfaces shall be thoroughly swept clean and loose millings removed at contractor expense.

Surface Texture

The surface texture produced for a finished pavement shall be a grid surface with uniform discontinuous longitudinal striations or any other pattern that will provide, in the opinion of the County, a satisfactory riding surface with adequate skid resistance. It is the intent that the average texture depth resulting from a number of tests directed by the County be not less than 0.20". Should the texture depth fall below the intended, the finish procedures shall be revised to produce a surface texture acceptable to the County.

Traffic Control

Contractor shall be responsible for maintenance and protection of traffic as per the most recent version of the New York State Manual of Uniform Traffic Control Devices. The bidder shall provide a cost adjustment (deduct) option on the BID SHEET in the event the County wishes to provide all traffic control functions.

METHOD OF MEASUREMENT

The cold milling/planing of asphalt pavement or mixed compositions shall be measured by the square yard actually performed.

Work prescribed by this item will be measured by the square yard surface area. Square yard calculations will be based on dimensions determined from measurements of the actual area planed and textured as authorized.

Measurement and payment will be limited to longitudinal length and width of which there is a definite texture present.

METHOD OF AWARD

Bid Awards shall be made to lowest responsible bidder for each individual project.

BASIS OF PAYMENT

The unit prices (per square yard) shall be bid for Cold Milling of Asphalt Pavement with either an up-cut or down-cut milling machine and an "in-line" crushing & screening unit (if an "in-line" crusher/screener is used).

The unit price shall include: the cost of cleaning the pavement, cold milling, "in-line" crushing/screening (if an "in-line" crusher/screener is used), loading millings into trucks, furnishing, replacing and maintaining temporary pavement materials where required, all survey and measurements necessary to assure the removal of material to the depths ordered by the County, sweeping the milled surface completely clean and ready for asphalt paving and all labor, equipment and materials necessary to complete the work to the satisfaction of the County.

As stated above under SCOPE OF WORK and Description, unit price bids will be based on the County hauling millings way from jobsite. Contractor shall verify all estimated quantities listed on the Bid Sheet prior to bid. Due to variable cross sections of pavement, the actual depth and amount of pavement being milled off may not be a full 2" or 3" depth (depending on which Project Number) across the entire lane especially on the outer edge of the pavement. The intent is to mill two (2) or three (3) inches deep at the centerline depending on the Project Number and set the milling machine to run a 2% slope from the centerline to the shoulder.

Mobilization

Costs for the mobilization of labor and equipment shall be included in the per square yard unit price.
